ABSTRACT:

PROBLEM TO BE SOLVED: To obtain the subject deodorant in low costs that has excellent effect to-deodorize or reduce unpleasant odors as mammalian body smell without problem on safety by using an extract from sugar cane.

SOLUTION: This deodorant contains an extract from sugarcane (a deodorization substance that is obtained by treating the raw material selected from sugarcane juice or sugarcane molasses with column chromatography). The extract from the sugarcane product is prepared by allowing the raw material to pass through the column filled with synthetic adsorbent as an immobilized carrier and the adsorbed components are eluted with an eluent selected from water, methanol, ethanol and their mixtures into fractions and the objective deodorant is obtained as some eluate fractions.
